

Dear Valued Electric Utility Customer,

The City of Buffalo has chosen to standardize its utility metering systems.

The benefits of a standardized metering system are a reduction in environmental impact by lowering fleet deployment; improving the City's ability to efficiently serve your utility needs; as well as provide you with easy accessibility to your account and the ability to monitor your electric power use.

There is no cost to the property owner for the new meter or its installation.

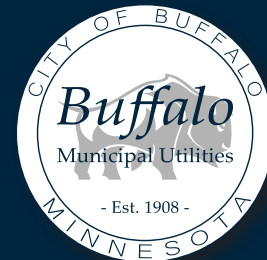

Most electric meters are located on the exterior of a building and contain a bypass, so no appointment will need to be made for the meter change and you should not experience disruption in service.

To prepare for the meter replacement, we ask that you please clear the area around the electric meter to provide easy access for the electric staff.

Prior to the new electric meter installation, you will be notified by letter as to the timeframe the work will take place. A Buffalo Municipal Electric crew member will remove the current meter and install the new electric meter. When the work is done, they will leave a door tag letting you know the work has been completed.

We appreciate your cooperation and patience during this process.

Thank you,
Buffalo Municipal Utilities
